- Hi Gabi,

this is my workflow here the deferred status issues are moving into next sprint this transition resolution was default "unresolved" but am confused to mention where i have to put resolution field.

Hi, Mahendar

You'll need to set a resolution everytime you move an issue to a concluded status (green color), in this case, to the status CLOSE of your workflow.

Was this helpful?

Yes

No

#6851

This post-function will automatically set a resolution for every issue you move to CLOSE status.

You can follow this doc to make this configuration: [Advanced workflow configuration](#).

Let me know if this helps! :)

Hi, Mahendar

This completed issues moving to the next sprint problem could be happening for two reasons:

1. You don't have this 'resolved' status mapped in your board
2. You don't have a resolution value set for those issues

Could you please check if one of them apply to your scenario?
